Mars

Opticolour have a range of 44 standard colours including metallic and sparkle effects. We are also able to mix colours to order, including the sparkle and metallic effects.

We are also able to mix all Ral, BS, Dulux, Farrow & Ball colours.

We can also mix bespoke colours if you send us something to match. We will then mix as close to your sample as possible.

Please be aware that colours will look much shinier through glass, so will not necessarily look exactly the same as your paint. It is often safer to consider a slightly contrasting colour.

For special colours and effects there is a modest mixing charge.

Colours appear very differently from computer to computer, both on the screen and when printed with different printers. This page, when viewed on a computer, can only give an approximate indication of the actual colour of the Opticolour glass. We have printed swatches available upon request and also actual glass samples.

Please see www.opticolour.co.uk for further information.
